

ABSTRACT OF THE DISCLOSURE

Disclosed herein is a non-contact information recording medium for ink-jet recording, on and from which information can be recorded and read in a non-
5 contact state from the outside, comprising an electronic information storing circuit part and an image recording part, wherein at least part of the electronic information storing circuit part has an ink/circuit-part barrier structure by which the circuit
10 part undergoes no circuit trouble caused by an ink applied to the image recording part.
